

Insole-King: Black-Boxx-I, Manhattan & Medical insoles

A. Black-Boxx I HDF scanner (art nr. 83.60.0010.0)

The Black-Boxx - I HD Foot scanner is a new developed foot check and analysis device, which can easily be placed in a shop or measuring room.

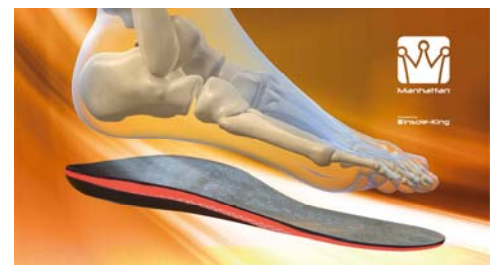

It uses advanced scan technology in combination with online software. The scanner is directly controlled and installed from the online software (website).

The online software gives an automatic advise for a footcare product such as a Manhattan insole, Medical insole or a Manhattan shoe. This is based on the automatic recognition of the foot type, the length and width measurement of the foot.

Properties:

- *With the latest high definition video scan technology*
- *Higher resolution 2D image then a conventional 2D scanner*
- *Almost no wearing because of none moving or rotating parts*
- *Software which controls the scanner is fully online; because of this*
- *Always access to the latest software version and*
- *Always automatically backup of the data*
- *Software including shoe -and insole advice system*
- *Scans are automatically cutted out from the background and feet are measured*
- *Automatically recognition of the foot type (normal/pronation/supination)*
- *Scan data can be imported in every CAD insole design program*
