Web-King 3D Laserscanner 1200

The Web-King Laser Scanner 1200 is an online laser scanning system to capture data from foamboxes and / or plaster forms.

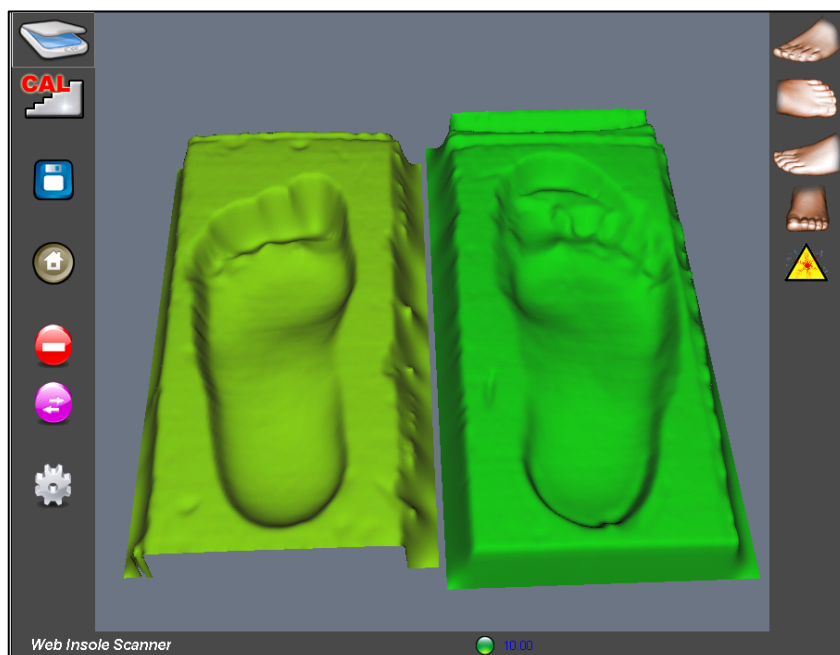

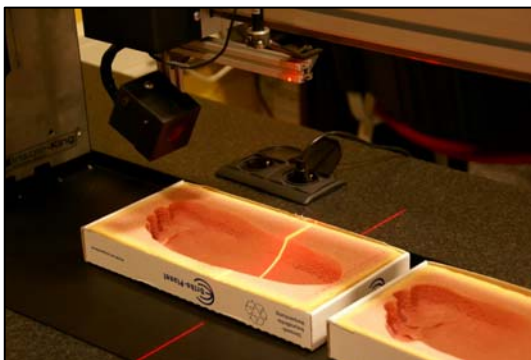

The scanner scans 2 foam boxes (left and right foot) at the same time within 15 seconds. After the scanning procedure, you can see the result on your screen.

If you are satisfied with the result, just click one button to import (upload) into the customer file, ready to use.

No other complicated adjusting preparations of the scan are needed, what you see is what you get. with the Web-Cad Insole Creator you can start to create a well fitting custom made insole.

With both insoles on your screen all the time, you have optimal functionality to review your work all the time. Better quality in less time for less costs.

Just click the 3D laserscanner with the USB connection to your computer and the scanner will automatically install itself. After a simple calibration, the 3D laserscanner is ready for use.

Advantages Web-King Laser Scanner 1200:

- **Accessible:** because the system is online, you can scan from any location
- **Secured:** all data is online stored, backuped and secured on your account
- **Updates:** always up-to-date with the latest software version because of the direct online updates
- **Timesaving:** scan your desired objects on a simple and efficient way
- **Professional:** digitizing in only 15 seconds
- **Efficient:** use the scanner for digitizing your foam boxes, plaster moulds, vacuum bags, etc
- **Flexible:** 2 foam boxes can be digitized at the same time
